**Revolutionary V-System Device Exchange is Now Combined with New Basket Designs, a Rotation Mechanism, and Wire Guided Access**

**The Innovative V-System Design Lets You Proceed with Confidence and Efficiency**

The V-System is a complete system that integrates Olympus endoscopes and EndoTherapy devices. The revolutionary V-System design offers the option of guidewire manipulation by the physician or the assistant, allows easier exchange of catheters, and enhances cannulation capability.

**V-Marking**

Indicates when to raise and lower the V-Groove forceps elevator.

The exclusive V-Marking is located on the proximal side of the sheath. When this marking reaches the channel port on the scope’s control section, it indicates that the device tip has reached the distal end of the scope and the V-Groove forceps elevator may be lowered. When withdrawing the device from the scope, the same marking indicates when to raise the elevator to lock the guidewire.

---

**Injection port for contrast media facilitates fluoroscopic visualization.**

**Sterile single-use design for convenience both before and after procedures.**
An emergency device, this is only to be used in the unlikely event of basket impaction due to an extremely hard calculus.
